1983 Cumulative Reviewer Index

Reviewers are the real authors of Computing Reviews. Their voluntary contributions provide the computing community with critical perspectives on published literature. We list here all the reviewers who had material published in the 1983 CR; furthermore, to properly identify their role as the "authors" of CR, we are including for each reviewer the information which identifies each review they wrote—name of bibliographic item, author, and review number.

1983 Cumulative Author Index

This index lists the authors of all books and papers reviewed or abstracted in *Computing Reviews* in 1983, together with the review numbers. The latter can be used to find the issues of *CR* containing the full bibliographic citation and its review. Because of the number of multiple authors, and the abstracts in addition to the reviews, too much space would be needed to print the actual citation here. The complete author-title-review number index will eventually appear in the 1983 *ACM Guide to Computing Literature*.
